EVERLIGHT

DATASHEET

339-9SUGSURSUBW/S1182/MS

Features

- Popular T-1 3/4 round package.
- ' High efficiency.
- Available on tape and reel.
- Built in red, green, and blue chips.
- [·] The product itself will remain within RoHS

compliant version

Descriptions

- The series is specially designed for applications requiring higher brightness
- The LED lamps are available with different olors, intensities, epoxy, colors, etc.

Applications

- ' Status indicators.
- ' Commercial use.
- [•] Advertising Signs.
- [·] Message board

Device Selection Guide

LED Part No.	Material	Emitted Color	Lens Color
	AlGaInP	Brilliant Red	XX/1 · / 1· CC 1
339-9SUGSURSUBW/S1182/MS	InGaN	Brilliant Green	White diffused

DATASHEET LAMP 339-9SUGSURSUBW/S1182/MS

EVERLIGHT

Notes:

[•]All dimensions are in millimeters, tolerance is 0.25mm except being specified. [•]Lead spacing is measured where the lead emerges from the package.

[•]Protruded resin under flange is 1.5mm Max LED.

Re

Packing Specification

Re

8

Notes

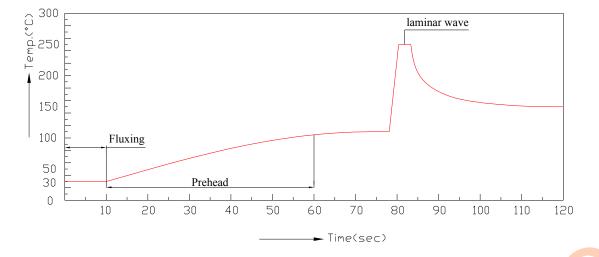

- 1. Lead Forming
 - During lead formation, the leads should be bent at a point at least 3mm from the base of the epoxy bulb.
 - Lead forming should be done before soldering.
 - Avoid stressing the LED package during leads forming. The stress to the base may damage the LED's characteristics or it may break the LEDs.
 - Cut the LED leadframes at room temperature. Cutting the leadframes at high temperatures may cause failure of the LEDs.
 - When mounting the LEDs onto a PCB, the PCB holes must be aligned exactly with the lead position of the LED. If the LEDs are mounted with stress at the leads, it causes deterioration of the epoxy resin and this will degrade the LEDs.
- 2. Storage
 - The LEDs should be stored at 30°C or less and 70%RH or less after being shipped from Everlight and the storage life limits are 3 months. If the LEDs are stored for 3 months or more, they can be stored for a year in a sealed container with a nitrogen atmosphere and moisture absorbent material.
 - Please avoid rapid transitions in ambient temperature, especially, in high humidity environments where condensation can occur.
- 3. Soldering
 - Careful attention should be paid during soldering. When soldering, leave more then 3mm from solder joint to epoxy bulb, and soldering beyond the base of the tie bar is recommended.
 - Recommended soldering conditions:

Hand Soldering		DIP Soldering			
Toma at the officer	300 Max. (30W	Duck oot town	100 Max. (60 sec		
Temp. at tip of iron Max.)		Preheat temp.	Max.)		
Soldering time	3 sec Max.	Bath temp. & time	260 Max., 5 sec Max		
Distance	3mm Min.(From	Distance	3mm Min. (From		
solder joint to			solder joint to epoxy		
epoxy bulb)			bulb)		

9

Copyright ©2014, Everlight All Rights Reserved. Release Date :July,12014/11. Issue No: DLE-0003486_Rev.2 WWW.everlight.com

Recommended soldering profile

- Avoiding applying any stress to the lead frame while the LEDs are at high temperature particularly when soldering.
- Dip and hand soldering should not be done more than one time
- After soldering the LEDs, the epoxy bulb should be protected from mechanical shock or vibration until the LEDs return to room temperature.
- A rapid-rate process is not recommended for cooling the LEDs down from the peak temperature.
- Although the recommended soldering conditions are specified in the above table, dip or handsoldering at the lowest possible temperature is desirable for the LEDs.
- Wave soldering parameter must be set and maintain according to recommended temperature and dwell time in the solder wave.

4. Cleaning

When necessary, cleaning should occur only with isopropyl alcohol at room temperature for a duration of no more than one minute. Dry at room temperature before use.

Do not clean the LEDs by the ultrasonic. When it is absolutely necessary, the influence of ultrasonic cleaning on the LEDs depends on factors such as ultrasonic power and the

• cause damage to the LED.

5. Heat Management

Heat management of LEDs must be taken into consideration during the design stage of LED application. The current should be de-rated appropriately by referring to the de-rating curve found in each product specification.

- The temperature surrounding the LED in the application should be controlled. Please refer to the data sheet de-rating curve.
- ESD (Electrostatic Discharge) 6.
 - Electrostatic discharge (ESD) or surge current (EOS) can damage LEDs.
 - An ESD wrist strap, ESD shoe strap or antistatic gloves must be worn whenever handling LEDs.
 - All devices, equipment and machinery must be properly grounded.
 - Use ion blower to neutralize the static charge which might have built up on surface of the LEDs plastic lens as a result of friction between LEDs during storage and handing.
- 7. Other
 - Above specification may be changed without notice. EVERLIGHT will reserve authority on material change for above specification.
 - When using this product, please observe the absolute maximum ratings and the instructions for using outlined in these specification sheets. EVERLIGHT assumes no responsibility for any damage resulting from use of the product which does not comply with the absolute maximum ratings and the instructions included in these specification sheets.
 - These specification sheets include materials protected under copyright of EVERLIGHT corporation. Please don't reproduce or cause anyone to reproduce them without EVERLIGHT's consent.
